# Kerabit green roof verge trim HST

Päivitetty 22.4.2025 Tulostettu 12.11.2026

The green roof verge trim can be used to give a finished look to the verges and upper eaves. The product is made of acid-resistant steel that is best suited to withstanding any stress found in green roof systems. The trims are two metres long. They come with an extension piece.

For a construction example, refer to the detailed drawing, which indicates the installation order of the flashings and their connection to the waterproofing.

If desired, a coloured covering strip can be installed on top of the flashing.

## Technical data

| | |
|---|---|
| **Manufacturer / Manufactured for** | Kerabit Oy |
| **Country of origin** | Finland |
| **Production material** | acid-resistant steel |
| **Nominal thickness** | 0,7 mm |
| **Dimensions** | Length 2,0 m, height 135 mm, flange width 150 mm |
