

Kerabit Root Prevention Membrane

Päivitetty 17.5.2021 Tulostettu 9.2.2026

Kerabit Root Prevention Membrane Grey is a torch-on modified bitumen membrane with product classification 2 used to protect green roof waterproofing against roots. It is used as an accessory for the sand-finish Kerabit Root Prevention Membrane in, for example, upturns and other visible details that remain exposed to sun rays.

The product has a strong polyester carrier and granulated surface. The root prevention membrane is tested according to standard EN 13948 (FLL method).
